This publication provides a summary of the critical components of child care (demand, supply, and cost) from 2007 to 2016. The analysis is based on the data collected by LOCATE: Child Care of the Maryland Family Network and the Maryland Child Care Resource Network. The historical data collected from 2007 to the present is analyzed in the following summary and is used to project the data forecasts for 2012 through 2016 using Cycle Regression Analysis. The results of the analysis are presented through a combination of graphs, charts, and text descriptions that summarize the data and interpret the trends.

The chart above shows the total number of children in Maryland and groups them into the indicated age ranges. The chart indicates the data collected to date and projects the size of the population from which the future need for child care will come. It is estimated that 79% of the total population of children under the age of 12 have mothers in the work force and may require child care.

Analysis of the data provides the following trends:

- The number of children in the 0-4 age group is projected to decrease by about 27.3% from 2012 through 2016.
- The number of children in the 5-9 age group is projected to decrease by about 0.6% from 2012 through 2016.
- The number of children in the 10-11 age group is projected to decrease by about 8.6% from 2012 through 2016.
- The total number of children under 12 in Maryland is projected to decrease by about 11.3% from 2012 to 2016.

How many children in Maryland will need child care in the future?

In Maryland, 79% of children under age 12 – more than 557,000 children in 2016 – may require child care while their mothers are at work.
How many child care providers will there be in Maryland in the future?

The graphs above depict the number of licensed child care providers in the state of Maryland, including both family providers and center-based programs. Separate graphs indicating the number of school-age programs and full-day infant care are also provided. The graphs indicate the actual numbers collected to date and show projections based on this information for the near future.

As shown in the first graph, the number of family child care providers in Maryland shows a projected decrease of about 13% from 2012 to 2016. Over this same period, the number of center-based programs shows a projected growth of about 5%.

The second pair of graphs depicts the growth of school-age programs and full-day infant centers in Maryland. The number of school-age programs has been relatively stable until 2007, but started to decreased in 2007 and is projected to continue to decrease by about .3% from 2012 to 2016. The number of full-day infant centers has grown at an extremely rapid rate from 2007 to the present and is expected to grow by 13% into the year 2016.
Is there a need for child care that can serve children with social/emotional disorders?

The need for child care for children with special needs is substantial, and children with emotional and social disorders comprise a large segment of the population in need of these services.

In 2011, LOCATE: Child Care’s Special Needs Service provided enhanced child care resource and referral services to the families of 1,419 children with special needs. The demand for these services was greatest for young children – from birth to age six.

A majority of the 1,419 children served (64%) were under the age of six. Only 7% of services related to children age twelve to twenty-one. Fifty-five percent (55%) of children served by LOCATE’s Special Needs Service had a single disability while 45% had multiple disabilities.

Many children with a disability need some accommodation in child care settings. In earlier years, LOCATE had noticed a significant number of children needing social/emotional accommodations. Since 2006, the percentage of children needing social/emotional accommodations has remained in the 36%-39% range. However, this year shows a significant increase as 44% of the children with special needs served by LOCATE needed social/emotional accommodations.

Of the children requiring social/emotional accommodations, most are affected by Attention Deficit Hyperactivity Disorder (ADHD) or Autism. While the percentage of children affected by ADHD has remained steady in the 8%-10% range since 2007, the percentage of children with Autism has increased from 13% in 2007 to the current 22%.

1 Numbers include children with developmental delays as well as those with social/emotional disorders. Children with developmental delays often need social/emotional accommodations in the child care setting.
2 Includes such conditions as depression, obsessive compulsive and other emotional disturbances.
What about non-traditional hours of care?

Approximately 20% of caregivers are licensed to offer evening or overnight care.

![Pie chart showing distribution of care hours]

Of the caregivers that are licensed for evening or overnight care, about 77% actually offer non-traditional hours of care.

In fiscal year 2011, LOCATE: Child Care received requests for child care for 12,007 children. Of these requests, 7% (867) needed care during evening hours (6:00 p.m. to midnight), and 0.7% (90) needed care overnight (midnight to 6:00 a.m.). The percent of demands for evening care and overnight care remained basically the same as last year.

*Percentages do not equal 100% because of rounding.

1 This is the defined time for the start of evening care.

2 This is the defined time for the start of overnight care.
Will the cost of child care continue to grow?

The cost of care has shown, and will continue to show, general growth.

The charts above show actual and projected weekly costs of regulated child care in Maryland, grouped according to child age.

The charts include both the actual cost data collected to date and the projected future costs based on the trends of these data. Analyzing the cost data shows that all child care costs are projected to increase through 2016 from about 6% to 16% of this year’s costs, depending on age and type of care.

The cost of care for children age birth to two is the highest for any age group and shows a projected growth in both types of programs – 7% for family child care and 8% for center-based programs. The cost of care for children age birth to two in center-based programs is the highest cost of any age group in either type of program.
The U.S. Department of Health and Human Services recommends that parents should not spend more than 10% of their family income on child care.

The chart above shows the percentage of income that is spent on child care by a family using child care services and projects the spending requirements into the near future. There are three jurisdictions presented on the chart to represent three different population area types – an urban population (Baltimore City), a suburban population (Montgomery County), and a rural population (Garrett County).

The current expenditures are all above the recommended goal of 10%, and all three jurisdictions show a projected increase over the next five years. Based on these projections, none of the three areas is expected to meet the 10% goal by 2016.
What about the turnover rate among center-based child care staff?

33% of center-based staff left their positions during 2006.

Funding issues precluded a survey being accomplished this year to update these values.

In 2007, Maryland Committee for Children (MCC) conducted a survey of child care centers in the state to measure the extent of staff turnover. Responses were received from 372 of the centers. The workforce employed by the 372 responding centers numbered 4,116, as of January 1, 2006. In the ensuing year (January 1 through December 31, 2006), 1,357 members (33%) of this child care workforce left their positions.

The greatest turnover (42%) occurred in the teacher assistant/aide group. The director group had the least turnover.

What factors contribute to the turnover rate among center-based child care staff?

Compensation is the major factor affecting staff turnover.

In the survey cited above, responses from 159 centers (54% of those centers who responded to this question) indicated that compensation was a significant factor in the decision of employees to leave their jobs. Respondents were asked to indicate which aspects of compensation played a role in turnover. Wages ranked highest in this regard, followed by other concerns:

- 157 centers cited wages as an issue in turnover;
- 83 centers cited health benefits;
- 28 centers cited paid leave; and
- 24 centers cited various other concerns.

Not all staff turnover was attributed to compensation. Surveys from 138 centers (46% of those centers who responded to this question) reported that compensation was not a factor in turnover. These centers cited various reasons for turnover including life cycle events such as marriage, pregnancy, employee's desire to stay home with their own children, returning to school, getting a degree and seeking other employment, moving, retirement, etc.

1 Twenty percent (20%) of responding centers did not answer the question regarding the relationship of compensation to turnover.
What about the family child care provider turnover rate?

12% of Maryland’s licensed family child care providers left the profession last year.

This turnover rate is slightly more than the last two years and continues to be a source of concern. One outcome of high turnover is inconsistent care for children who are forced to change from one caregiver to another. In addition, high turnover creates a less-experienced child care workforce. In the year ending in June 2011, 79% of family child care providers sampled had been operating for more than three years with 42% in operation for more than nine years. Six percent had been operating their business for less than one year, according to MFN data.

The provider turnover rate represents changes in the child care provider database due to providers being deleted (leaving the child care profession due to the provider’s personal/family issues, burn-out, or career change) and new providers being added. The turnover rate is calculated as the number of family child care providers deleted from the database during the year divided by the sum of family child care providers at the start of the year plus the number of providers added during the year. There was a net loss of 415 family child care providers in Maryland between July 2010 and June 2011.

What attracts people to a career in family child care? What causes them to leave?

In 2011, MFN surveyed 148 new family child care providers. As shown below, their primary reasons for entering the child care profession were that they enjoy working with children and that they want to stay home with their own children.

</tbody>
</table>

Source: MFN/LOCATE: Child Care, July 2011.

In 2011, MFN also surveyed 234 family child care providers who were leaving the child care profession. As shown below, they were leaving the child care profession because they moved; they experienced burnout or retired or got a new job; or they couldn’t attract enough children to make their child care business profitable.

What are the average salaries of child care workers in Maryland?

The salaries of child care workers are low, when compared to other occupations – ranging between $8.66 and $19.00 per hour.

The chart above summarizes the salary growth of four categories of child care workers. Actual data, collected to the present date, is indicated as well as future projections based on these data. As depicted in the graph, the salaries of all child care workers show a general increase to date with continued projected growth.

Other surveys of child care wages support these data and projections. *Fifty Cents on a Dollar: Child Care Compensation in Maryland* (1998) reports a range of hourly wages between $6.26 for center aides and $11.62 for center directors, while the *National Child Care Staffing Study* (1998 update) reports a range of $6.00 to $10.85 per hour for aides and teachers.

Based on current trends, by 2016, all average salaries are projected to grow by 4% to 13% of their 2011 level. The salaries of all center staff are projected to continue their growth at a higher rate than family child care providers over the next five years.
Over the past several years, programs, both at the state and national level, have been created to improve the quality of child care. These voluntary programs have been credited with developing criteria for improving both child care programs and the individuals working in the child care field. Participation in one of these programs provide recognition to those child care providers or programs that go beyond the requirements of state licensing and regulations.

Successfully meeting the established criteria for programs is recognized by awarding the program a status of “accredited”. Likewise, meeting the criteria for individuals working in child care programs is recognized by awarding a status of “credentialed”. Documentation of these efforts has been tracked for five years and the results are shown below.

Examination of the charts above increases (some are significant increases) for most areas. Increased participation in these programs is imperative in improving the quality of child care in the state of Maryland.

*Only full day (8-12 hours) child care centers are included in this number.

### Additional resources from Maryland Family Network

**Child Care Demographics** provides annual data for components of the child care system (demand, supply, cost, wages) for the state and separately for each of the 23 counties and the city of Baltimore.

**Child Care and Early Education in Maryland 2005** provides a guide to the programs and resources in Maryland’s child care system.

**The Maryland Child Care Resource Network Training Calendar**, published three times a year, provides a listing of training opportunities for child care providers statewide.

**Child Care for Children with Special Needs** reports on a survey, conducted in 2009, of child care providers relating to the availability and quality of child care for children with special needs.

**Identifying Mental Health Problems in Young Children: How Child Care Providers Can Help** offers a checklist of behaviors that indicate the need for professional evaluation and suggests ways providers might discuss this with parents.

**Young Children’s Mental Health Policy Conference 2006** recaps the proceedings of conferences held in 2002, 2004, 2005, and 2006 including an assessment of and vision for mental health services for young children in Maryland.

**Conversations on Curriculum** reports on a conference held in January, 2002, which explored best practices in assessment and curricula in early childhood education. The full report and an executive summary are available on [www.marylandfamilynetwork.org](http://www.marylandfamilynetwork.org), under the section entitled “For Child Care Providers.”

**Family Child Care Providers in Maryland: A Profile** presents data gathered in 2004/2005 on family providers and their programs.

**LOCATE: Community Resources Assistant** (also known as the Community Resource Database) is a service provided through the Maryland Child Care Resource Network and the Maryland Family Network. **LOCATE:** Community Resources Assistant provides information on resources available to the child care community, parents and families, and others. Maryland Family Network, 410-659-7701.

Information on after-school care, including user searches by county and neighborhood, is available at [www.mdafterschool.org](http://www.mdafterschool.org).

For other publications and information about child care in Maryland, visit the MCC website at [www.marylandfamilynetwork.org](http://www.marylandfamilynetwork.org).
This publication was produced by Maryland Family Network as a work for hire for the benefit of, and with funds from the Maryland State Department of Education.

Maryland Family Network, as Statewide Coordinating Entity for the Maryland Child Care Resource Network, has prepared *Trends in Child Care*, to assist those interested in identifying future child care needs. Funding for this publication was made available by Maryland Family Network, the Division of Early Childhood Development of the Maryland State Department of Education, and Maryland's business community.
